

## Project Report: MyProfileApp

### Design Choices:

- **Layout and Structure:** We structured the app using React Native components, including View, Text, Image, ScrollView, and TextInput. This ensured a clean and user-friendly interface.
- **Information Content:** The app provides educational content about machine learning. We chose specific, concise facts to engage users and provide value through quick insights.
- **Visual Aesthetics:** A minimalist design with consistent padding and colors was chosen to enhance readability and user experience.

### Challenges Encountered:

- **Integration of Components:** Aligning text and images responsively across different device sizes was initially challenging, requiring adjustments in styling for uniform appearance.
- **Content Delivery:** Deciding on the most essential machine learning facts to include within the limited space of a mobile screen involved prioritizing information to balance educational value and brevity.

These choices and solutions helped us overcome challenges and achieve a functional and informative app.
